BLINKIT

Existing Product Teardown

Understanding the current experience, finding friction, and prioritizing opportunities.

Product teardown • User journey • Friction • Opportunities

Blinkit turns everyday shopping into an on-demand task.

NEED → DISCOVER → ORDER → RECEIVE

PRODUCT OBSERVATION

Hyperlocal availability

The delivery address shapes the available shopping experience.

PRODUCT OBSERVATION

Fast doorstep delivery

Speed and convenience are central to the product proposition.

PRODUCT OBSERVATION

Broad everyday assortment

Everyday items across categories in one shopping destination.

From instant commerce to everyday convenience.

MISSION PUBLIC FACT	**Instant commerce indistinguishable from magic**
	↓
USER VALUE PM SYNTHESIS	Reduce the need to plan everyday necessities
	↓
PRODUCT PROMISE PM SYNTHESIS	Make everyday shopping fast, convenient and low-effort
	↓
SYSTEM PUBLIC FACT / PM SYNTHESIS	Technology + Customer Insights + Dense Store Network

THE TIME-CONSTRAINED EVERYDAY SHOPPER

PM SYNTHESIS / USER HYPOTHESIS

When I suddenly need an everyday item, I want to find and order it quickly, so I can continue my day without making a separate shopping trip.

JOB TO BE DONE · SYNTHESIZED, NOT A USER QUOTE

TIME SENSITIVE

Needs something now

LOW PLANNING

Doesn't want a traditional shopping trip

CONVENIENCE SEEKING

Values saved time and effort

A sudden need becomes a doorstep delivery.

USER STORY / PM SYNTHESIS

I need an everyday item. I open Blinkit, find a suitable option, place an order and follow its progress until it arrives.

TRIGGER	DISCOVER	EVALUATE	DECIDE	CHECKOUT	TRACK	RECEIVE
“I need something”	Open / search	Compare options	Add to cart	Review order	Follow delivery progress	**Need fulfilled**

Eight stages. Three lenses on the current experience.

OPEN →	SEARCH →	BROWSE →	PRODUCT SELECTION →	CART →	CHECKOUT →	TRACKING →	DELIVERY
USER ACTION Launch app; verify delivery address	USER ACTION Search item or category	USER ACTION Scan listings or shelves	USER ACTION Evaluate pack size; add item	USER ACTION Review cart and bill	USER ACTION Select payment; authorize	USER ACTION Follow packing and rider transit	USER ACTION Collect doorstep package
USER QUESTION Can I get delivery here now?	USER QUESTION Can I find what I need quickly?	USER QUESTION Is my preferred item in stock?	USER QUESTION Which option fits my need and value?	USER QUESTION What will I pay including fees?	USER QUESTION Can I pay without extra steps?	USER QUESTION Where is my order?	USER QUESTION Did everything arrive intact?
CURRENT EXPERIENCE Estimated delivery timeframe at top	CURRENT EXPERIENCE Type-ahead suggestions; category navigation	CURRENT EXPERIENCE Product cards with imagery	CURRENT EXPERIENCE Listing-level +ADD	CURRENT EXPERIENCE Itemized fees, tip option, cross-sells	CURRENT EXPERIENCE Payment options	CURRENT EXPERIENCE Order progress and delivery status	CURRENT EXPERIENCE Doorstep handoff; task completion

Convenience is built into the journey, not added to it.

LOW-FRICTION DISCOVERY	OBSERVATION Search, category navigation and listing-level add actions.	→	WHY IT MATTERS Users can move quickly from need to product.
BROAD EVERYDAY ASSORTMENT	OBSERVATION Everyday categories coexist in the shopping experience.	→	WHY IT MATTERS A single destination can cover many everyday needs.
CONVENIENCE VALUE	OBSERVATION Ordering and receiving items without visiting a store.	→	WHY IT MATTERS Removes travel, parking, store navigation, queueing and checkout overhead.
SPEED AS CORE VALUE	OBSERVATION Delivery expectations are prominent in the experience.	→	WHY IT MATTERS Fast delivery is central to the product proposition.

Urgency raises the cost of uncertainty.

INFORMATION DENSITY

PRODUCT OBSERVATION

Broad choices can increase decision effort.

PM HYPOTHESIS

Users may spend more time evaluating options during an experience optimized for urgency.

PRICE / TOTAL-COST CLARITY

PM HYPOTHESIS

Unclear total cost late in the journey could reduce purchase confidence.

DELIVERY EXPECTATION

PRODUCT OBSERVATION

Delivery expectations can change during the journey.

PM HYPOTHESIS

Unexpected uncertainty may weaken confidence in the instant-commerce promise.

PRODUCT AVAILABILITY

PM HYPOTHESIS

An unavailable exact item can interrupt the user's original task.

Four frictions. Four paths toward a clearer experience.

FRICTION ↓

Delivery uncertainty

OPPORTUNITY ↓

Increase confidence in arrival

PRODUCT IDEA ↓

Make delivery expectations clearer

USER OUTCOME

Higher confidence in the core promise

FRICTION ↓

Information overload

OPPORTUNITY ↓

Reduce decision effort

PRODUCT IDEA ↓

Surface clearer selection cues

USER OUTCOME

Faster product decisions

FRICTION ↓

Price uncertainty

OPPORTUNITY ↓

Increase checkout confidence

PRODUCT IDEA ↓

Make total payable amount easier to understand

USER OUTCOME

More confident purchase decisions

FRICTION ↓

Availability friction

OPPORTUNITY ↓

Protect task completion

PRODUCT IDEA ↓

Provide clearer alternatives

USER OUTCOME

Higher chance of completing the original need

Protect confidence in the delivery promise.

QUALITATIVE PM ASSESSMENT

Relative impact vs. implementation effort — hypothesis to validate

IMPACT ↑ Higher impact at top

Delivery Promise & Arrival Confidence Clarity	Inline Smart Substitution
Attribute Search Pills	Dynamic Cart Progress Engine

Lower effort EFFORT → Higher effort

PRIORITY #1

Reduce Uncertainty Around the Delivery Promise.

Delivery speed is not merely an operational feature; it is central to Blinkit's consumer value proposition.

Improving clarity and confidence around delivery expectations is therefore a strategically aligned product focus.

METRICS I WOULD VALIDATE AFTER INSTRUMENTATION

Search → purchase conversion

Checkout completion
